## What PdfStamper does for you

the problem

- add page numbers to a number of pdf files within (source) directory
- it numbers consecutively, starting with page 1
- PdfStamper NEVER modifies the source pdf's - it will ALWAYS copy them (page-by-page) to a target directory and add content only on the newly created copies.
- On the UI, you can configure a file-prefix and page-number-prefix.

Prerequisites

- all pdf files are located within (current or configured) directory
- all pdf files (should currently) have A4 size and portrait orientation
- page bottom has enough free space to add pagenumber and prefix

Limitations

Currently (in release 0.42), PdfStamper cannot:

- combine Pdf's into single file
- add graphics in header or footer
- add Pdf security to output files
- add the total-nr-of-pages

Bugs, Issues and Requests

Please use the issue-tracker at bitbucket.

Documentation

The documentation will grow into an arc42 example - it's currently just a beginning. Find the stuff in the /doc diretory (PdfStamper_arc42.md).

Future Plans

Software

- create an index: collect keywords from the pdf files, sort them and create a nicely formated index.
- stamp a header (in addition to the current footer)
- make the positions for page numbers configurable
- stamp pdf files of arbitrary page dimensions
- calculate the page number position on per-page-basis, instead of having a fix one
- preview generated files

Documentation

- Use PdfStamper as an example for arc42.
